## B.2. GRANT AND CONTRACT AWARDS

### B.2.a. Active Grants

1. 2015-2018 2014-MU-CX-0102  
**NATIONAL INSTITUTE OF JUSTICE** (Co-Investigator)  
“Development of a brief elder abuse and neglect screener for Emergency Medical Services: Detection of Elder abuse Through Emergency Care Technicians (DETECT)”  
Study description: The purpose of this project is to create and pilot test a tool for use by emergency medical technicians (EMTs) to increase detection and reporting of elder abuse and neglect. The study design includes focus groups conducted with EMTs and Adult Protective Services employees in Fort Worth, Texas. Upon development, this tool will be pilot tested and implemented as a part of the protocol for EMTs at MedStar in Fort Worth, TX.  
PI: Michael B. Cannell, University of North Texas Health Science Center  
Total Funding: \$369,039  
Total Subcontract Direct Costs: \$102,837
2. 2015-2018 1H79TI026072-01  
**SAMHSA Center for Substance Abuse Treatment (CSAT)** (Co-Investigator)  
"Enhancing Residential Treatment to Benefit Women in the Community"  
PI: Dallas County Department of Criminal Justice  
Description: The purpose of this collaboration with the Dallas County Department of Criminal Justice is to decrease the number of days that women in need of substance use treatment spend in jail. This program also seeks to understand how substance use treatment uptake impacts the likelihood of success (e.g., reduced use of drugs, employment, stable housing, and social connectedness) of women in Drug Courts over a 12-month follow-up period.  
PI: Dallas County Department of Criminal Justice  
Total Funding: \$318,092  
Total Subcontract Direct Costs: \$73,561
3. 2016-2018  
**HOGG FOUNDATION FOR MENTAL HEALTH** (Principal Investigator)  
Mental Health Peer Support Re-Entry Pilot Evaluation  
Description: This study will evaluate the impact of Certified Peer Support Specialists (CPS) on

recidivism, promote community tenure and encourage recovery of people in jail across each of the three project sites (Tarrant County, Harris County and the Rio Grande Valley). This pilot project was mandated by the Texas Legislature (RIDER 73).

\*Findings used in testimony to the Texas House of Representatives, Corrections sub-committee, May 1, 2018.

Total Direct Costs: \$30,814

4. 2017 –2022                    **NIH/NIMHD R01MD010733**                    (Gonzalez & Businelle, MPI)  
“m-Health to increase service utilization among recently incarcerated homeless adults”  
Description: This study will use mobile technology to address these barriers and fill gaps in the understanding of the causes of the revolving door of homeless incarceration. Specifically, 432 homeless adults who enroll in a shelter based Homeless Recovery Program after release from county jail will be randomly assigned to one of three treatment groups: 1) usual shelter based case management (UCM), 2) UCM plus a study provided smart phone (UCM+SP), and 3) UCM with a study provided smart phone that is preloaded with an innovative care management app (SPCM). Those assigned to SPCM will receive smart phones that will prompt (twice weekly) connections to shelter based case managers. The app will also offer direct links to care managers (available during normal business hours) and crisis interventionists (available 24 hours a day, 7 days a week), with the touch of a button. It is hypothesized that SPCM will increase utilization of case and crisis management services thereby addressing unmet needs (e.g., obtaining shelter, clothing, counseling, identification) and reducing homelessness and re-arrest. This research represents a step toward integrated service connection and healthcare service provision for one of the most underserved, high need, and understudied populations in the United States.  
Total Direct + Indirect: \$3,392,903
  
5. 9/30/18-9/29/2023                    **CSAT/SAMHSA**                    (PI: Dallas County Department of Criminal Justice)  
“Expanding Substance Abuse Treatment for Adults with Substance Use Disorders in Dallas County Adult Problem Solving Courts”  
Description: The purpose of this study is to expand and enhance the availability of recovery-oriented substance abuse treatment and recovery support services for men and women with substance use disorders in one of 14 certified Adult Problem-Solving Courts. The evaluation team (the PI and Study Coordinator) will conduct face-to-face interviews with participants at intake to drug treatment at the Nexus Recovery Center (for women) or Homeward Bound (for men), six months post-intake, and at discharge from the project (up to 12 months later). Potential participants will be screened by pre-trial release for program eligibility, interviews and study enrollment will not occur at the Dallas County Jail. We expect that those who are enrolled in this program will have significantly improved continuity of care in substance abuse treatment and on-going recovery as well as improvement in sustained recovery efforts and overall functioning.  
Total Subcontract Costs: \$190,000  
Role: Co-Investigator
  
6. 2/27/2027-5/31/2022                    **Laura and John Arnold Foundation**                    (PIs: Skeem & Petriola)  
*Randomized controlled trial of “Interventions” for justice-involved people with mental illness*  
Description: This project is a five-year initiative to transform the justice system’s response to people with mental illness. This randomized controlled trial will focus on improving outcomes for “high utilizers,” or justice-involved people who heavily use jail, emergency room, and/or inpatient psychiatric services. High utilizers with *low* risk of jail recidivism will receive Assertive Community Treatment (ACT), a well-established, evidence-based practice for people with serious mental illness, including those with co-occurring substance use disorders (or treatment as usual). In ACT, multidisciplinary teams of clinicians persistently work across the treatment, social welfare, and criminal justice systems to engage clients in treatment and directly provide services and support in the community around the clock.

High utilizers with moderate or high risk of recidivism will be assigned to Forensic ACT (FACT) teams, which add a probation officer to ACT's standard multidisciplinary clinical team, or treatment as usual.

Role: Co-Investigator

Total Direct + Indirect: \$1,637,106

7. 9/15/2018-5/30/2023 **NIH/NIA R01AG059993-01** (PI: Cannell)

“Detecting Elder Abuse Through Emergency Care Technicians (DETECT)”

Description: This study will result in the creation and validation of a brief screening tool for elder mistreatment that is based on medic's systematic observations of older adults and their physical and social environments, and can easily be integrated into their existing procedures and medical charting software. There are more than 800,000 EMTs and paramedics providing services in every county nationwide, a valid and reliable screening tool that is easy for EMS providers to use has the potential dramatically improve EM detection across the United States.

Role: Co-Investigator

Total Costs: \$1,614,750

### B.2.b. Active Grants: Mentor

### B.2.c. Completed Grants

2018 **SWCOEH / NIOSH Pilot Program** (Principal Investigator)  
“The Law Enforcement Officer Stress and Trauma Response Surveillance Study (LEO-STRESS): A Pilot Study”  
Abstract: This study will gather data to address two specific aims: 1) to identify the factors that influence uptake of the FitBit data collection methodology, including LEO buy-in, attitudes and challenges associated with use; and, 2) to examine how second-by-second physiological markers of acute stress exposure (heart rate) vary by the types of activities LEOs are involved in. To address these aims, our team will recruit a cohort of 10 DPD officers who will be followed over a 1-month period. Focus groups will be conducted to examine process measures, and participants will be provided with a FitBit Charge 2. These psychological data will be augmented with official records of calls for service, use of force, officer-involved shootings, injuries and workers compensation claims, citizen complaints, and other departmental records, to comprehensively operationalize exposure to stressful stimuli. We will also be able to determine whether these physiological responses to stress vary depending upon whether force was used or an arrest was made.

Total Direct: \$10,000

2016-2018 **UNIVERSITY OF TEXAS SCHOOL OF PUBLIC HEALTH (FRONT OF THE ENVELOPE)** (Principal Investigator)

“A Case-Control Study to Reduce Police Officer-Involved Shootings”

Description: This case-control study will assess whether military veteran officers or officers hired during periods of ‘mass hiring’ when large class sizes may compromise training quality (and an array of other factors) are at greater risk for involvement in shootings. Upon completion, this will be the most comprehensive dataset available to examine the intersection of contextual, training, and officer-level characteristics that most strongly predict officer involvement in shootings. This study represents a collaboration with the Dallas Police Department and the Caruth Police Institute.

Total Direct Costs: \$24,996

2017 **NIH/NIDA** (Consultant)

In-Person vs. Computer Interventions to Increase Probation Compliance

Description: This study compared two intervention formats that target motivation to initiate and engage in substance abuse treatment among a group of probationers who have drug or alcohol treatment conditions. Four hundred drug and alcohol offenders in two probation sites (Baltimore, MD and Dallas, TX) were randomized to receive: 1) an in-person motivational interviewing session (MI), 2) a motivational computer program (MC), or 3) supervision intake and monitoring as usual (SAU). Primary outcomes included HIV risk behavior, alcohol and drug use, and criminal justice involvement.

Meta-analysis of violence against women and cancer among women

Description: The National Institute of Justice (NIJ) requests a systematic review and meta-analysis of literature in the field related to violence against women (including sexual assault, childhood sexual trauma, sexual violence or victimization, domestic violence, teen dating violence, stalking, and intimate partner violence) and cancer in adults (e.g., cervical cancer, breast cancer, ovarian, etc.). The resulting paper may become a precursor to further research and program development work, and lay possible groundwork for evaluation efforts sponsored by NIJ and partnering agencies.

“Social, Familial, Neighborhood Factors and Drinking in Puerto Rico”

Description: Heavy drinking and alcohol-related problems are a serious health and social problem in Puerto Rico; yet, there is a dearth of up-to-date epidemiological data on the social, familial and neighborhood factors that determine drinking and its consequences on the island. Knowledge about these factors is important for implementing prevention interventions at the individual and neighborhood level. This project will study this complex array of factors in a random household sample of Puerto Rican adults in the San Juan metropolitan area.
